#### IV Interpretation of Results

##### A Interpreting the Scores

The BSIDIII provides a comprehensive profile of the child's developmental strengths and areas for growth. The scaled scores on each scale are compared to the normative data allowing for the identification of areas where the child may be developing at a slower pace. The examiner should consider the child's individual strengths and weaknesses as well as the context of their development when interpreting the results.

- Early identification of developmental delays
- Monitoring developmental progress

The BSIDIII demonstrates strong reliability indicating that the scales are consistent in measuring the intended developmental skills. Reliability studies have shown that the scales are highly reliable across different administrations and examiners.

##### B Validity

The BSIDIII has been shown to be valid meaning that it measures what it is intended to measure. Studies have shown that the scales are significantly correlated with other established measures of development and predict later developmental outcomes.

#### VI Ethical Considerations

##### A Informed Consent

Informed consent must be obtained from the child's parent or guardian before administering the BSIDIII. The purpose of the assessment, potential risks and benefits, and confidentiality of the information must be explained to the parents or guardians.

##### B Confidentiality

The information gathered from the BSIDIII is confidential and should only be shared with authorized individuals involved in the child's care.

##### C Cultural Considerations

The BSIDIII is designed to be culturally sensitive but it is important to be aware of potential cultural biases and to interpret the results in the context of the child's cultural background.
