this book presents the result of an innovative challenge to create a systematic literature overview driven by machine generated content questions and related keywords were prepared for the machine to query discover collate and structure by artificial intelligence ai clustering the ai based approach seemed especially suitable to provide an innovative perspective as the topics are indeed both complex interdisciplinary and multidisciplinary for example climate planetary and evolution sciences springer nature has published much on these topics in its journals over the years so the challenge was for the machine to identify the most relevant content and present it in a structured way that the reader would find useful the automatically generated literature summaries in this book are intended as a springboard to further discoverability they are particularly useful to readers with limited time looking to learn more about the subject quickly and especially if they are new to the topics springer nature seeks to support anyone who needs a fast and effective start in their content discovery journey from the undergraduate student exploring interdisciplinary content to master or phd thesis developing research questions to the practitioner seeking support materials this book can serve as an inspiration to name a few examples it is important to us as a publisher to make the advances in technology easily accessible to our authors and find new ways of ai based author services that allow human machine interaction to generate readable usable collated research content

this book focuses on the fundamentals and recent advances in rgb d imaging as well as covering a range of rgb d applications the topics covered include data acquisition data quality assessment filling holes 3d reconstruction slam multiple depth camera systems segmentation object detection salience detection pose estimation geometric modelling fall detection autonomous driving motor rehabilitation therapy people counting and cognitive service robots the availability of cheap rgb d sensors has led to an explosion over the last five years in the capture and application of colour plus depth data the addition of depth data to regular rgb images vastly increases the range of applications and has resulted in a demand for robust and real time processing of rgb d data there remain many technical challenges and rgb d image processing is an ongoing research area this book covers the full state of the art and consists of a series of chapters by internationally renowned experts in the field each chapter is written so as to provide a detailed overview of that topic rgb d image analysis and processing will enable both students and professional developers alike to quickly get up to speed with contemporary techniques and apply rgb d imaging in their own projects

this book describes recent innovations in 3d media and technologies with coverage of 3d media capturing processing encoding and adaptation networking aspects for 3d media and quality of user experience qoe the contributions are based on the results of the fp7 european project romeo which focuses on new methods for the compression and delivery of 3d multi view video and spatial audio as well as the optimization of networking and compression jointly across the future internet the delivery of 3d media to individual users remains a highly challenging problem due to the large amount of data involved diverse network characteristics and user terminal requirements as well as the user s context such as their preferences and location as the number of visual views increases current systems will struggle to meet the demanding requirements in terms of delivery of consistent video quality to fixed and mobile users romeo will present hybrid networking solutions that combine the dvb t2 and dvb ngh broadcast access network technologies together with a qoe aware peer to peer p2p distribution system that operates over wired and wireless links live streaming 3d media needs to be received by collaborating users at the same time or with imperceptible delay to enable them to watch together while exchanging comments as if they were all in the same location this book is the last of a series of three annual volumes devoted to the latest results

of the fp7 european project romeo the present volume provides state of the art information on 3d multi view video spatial audio networking protocols for 3d media p2p 3d media streaming and 3d media delivery across heterogeneous wireless networks among other topics graduate students and professionals in electrical engineering and computer science with an interest in 3d future internet media will find this volume to be essential reading
